Siskiyou County
ENTERPRISE GIS IMPLEMENTATION
REQUEST FOR PROPOSALS (RFP)
Open February 1-28, 2018

Answers to Vendor Questions Received

This document will be updated as questions are received, until the question submission deadline of February 13, 2018.

Q1: In reference to Siskiyou [C]ounty's RFP for Consultant Services for Geographic Information System Assessment and Implementation, would the county be open to an off-site solution or does the county require the consultant to be present on site for the majority of this project?
A1: No, the County does not require the consultant to be on site for the majority of this project. Remote access is a feasible solution for meeting the requirements in the Scope of Work.

Q2: The County's budget is $29,000. Do you have a schedule for completion?
A2: As stated in the RFP, Section 5 Item 8, "The schedule should indicate a deadline for delivery of final products on or before June 22, 2018."

Q3: Even though a majority of the implementation work should be performed on site would the County allow the successful consultant to perform work remotely?
A3: Remote access is a feasible solution for meeting the requirements in the Scope of Work.

Q4: Would the County of Siskiyou prefer all future work recommended in the assessment (outside of the ideas in this RFP) to be scheduled over three years? A multi-year investment in building-out the enterprise solution?
A4: The County would be open to receive future work recommendations that extend beyond the stated contract period ending July 1, 2018. We intend to continue developing this project.

Q5: Is this RFP limited to only California based companies?
A5: No, it is not limited to California based companies.

Q6: Do you have a list hardware that the county has already purchased?

A6: No, sorry. In your response, you may include a list of hardware that you recommend that supports your proposal. We will then evaluate that recommendation against our current infrastructure and acquire additional capacity, if needed.

Q7: Can Siskiyou County provide a list of datasets that the county has currently?

A7: Currently we have 11 departments participating. So far we've identified around 20 datasets that have high priority for being used countywide or within a department. At least half of these are currently used in GIS workflows by more than one department. There are other datasets that need to be developed.
